

Human NE-Elafin: ranking is not mechanistic validation

Receptor: 2Z7F chain E, SLPI removed | Ligand: 2REL model 1 | prediction, not an experimental complex

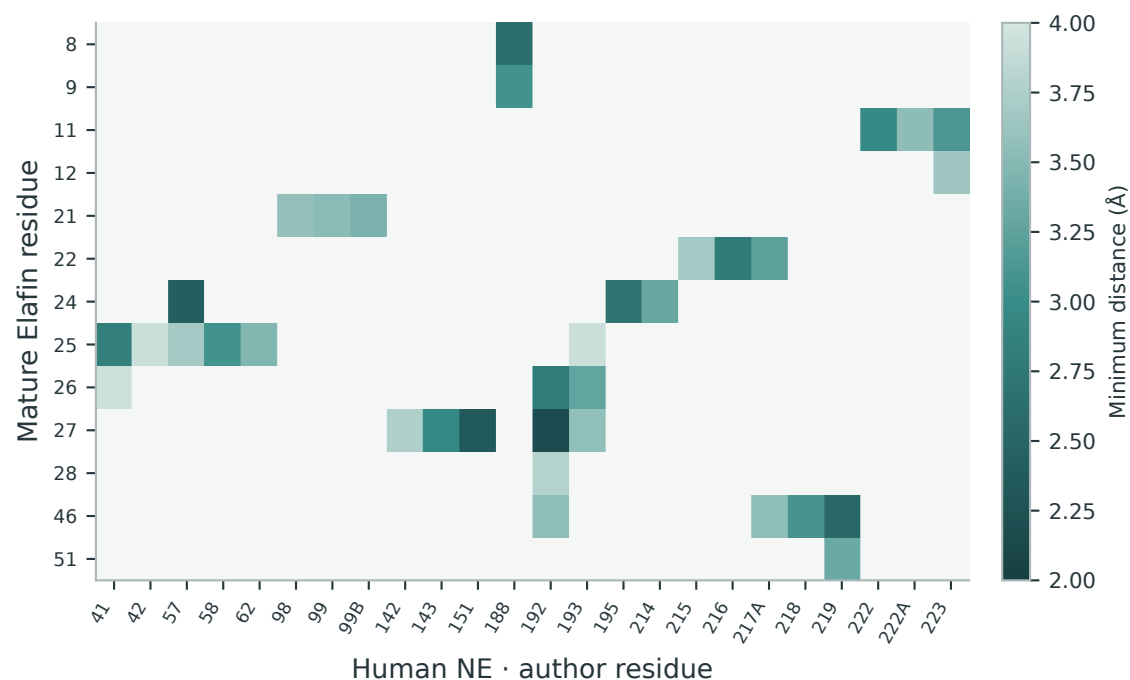

a Post-hoc geometry candidate: original rank 29

b Candidate contacts, not experimentally verified

c Rank 29 interface residue pairs (<4 Å)

Rank 1 does not place the reactive bond near catalytic Ser195. The displayed candidate was selected AFTER inspecting geometric plausibility.

Screen: Ala24 C-Ser195 OG <5 Å and no interchain heavy-atom pair <2 Å. A post-hoc screen is not validation; no Kd or inhibition is predicted.

d All 100 poses: score versus reactive-site proximity
