

Can blind docking recover the reference Elafin interface?

HDOCKlite 1.2 | 1FLE bound-chain redocking | 4,392 rotations | 100 ranked poses

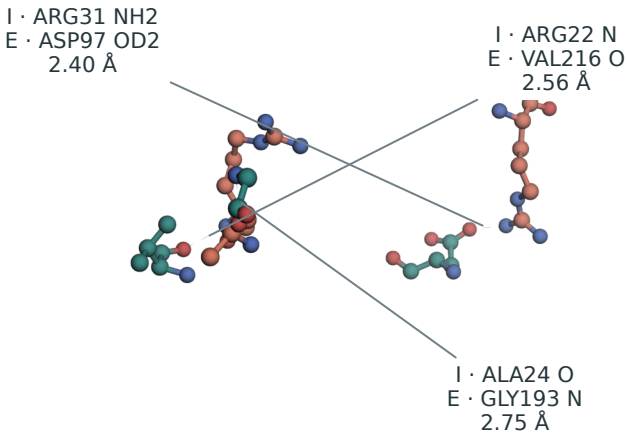

a Rank 1 prediction against the X-ray reference

b Ranking versus native-pose recovery

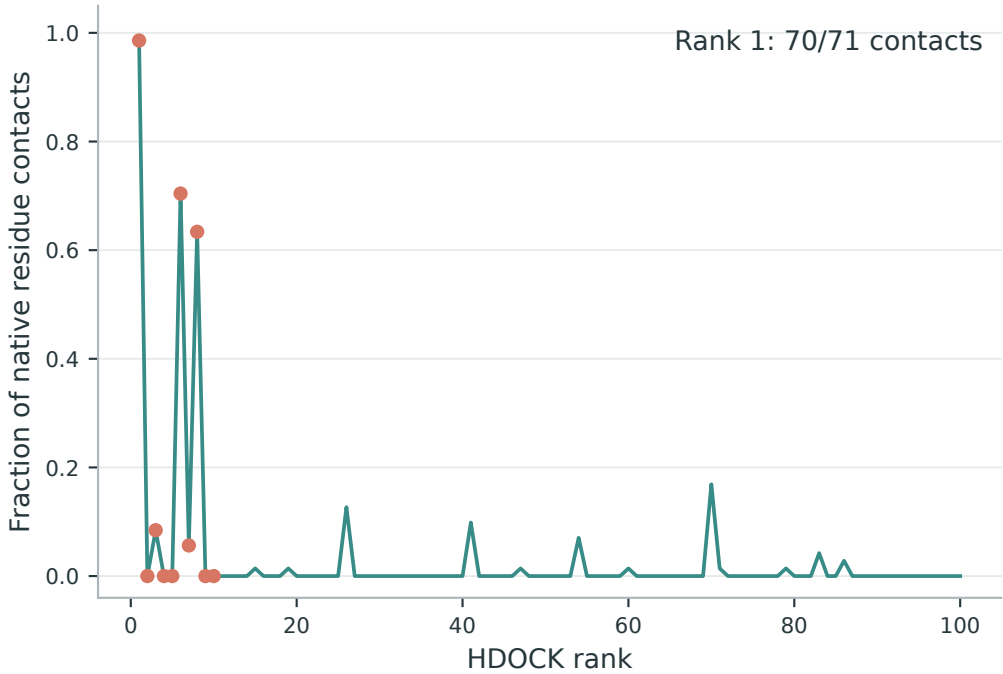

c Actual rank 1 interface: selected contacts

Geometric heavy-atom distances; not hydrogen-bond energies.

d Native contact recovery (<5 Å)

Native relative orientation was not supplied as a restraint; bound conformations were retained. Retrospective benchmark; no affinity is inferred.
