

Elafin at the interface: from deposited coordinates to contacts

PDB 1FLE | X-ray diffraction, 1.90 Å | human Elafin + porcine pancreatic elastase

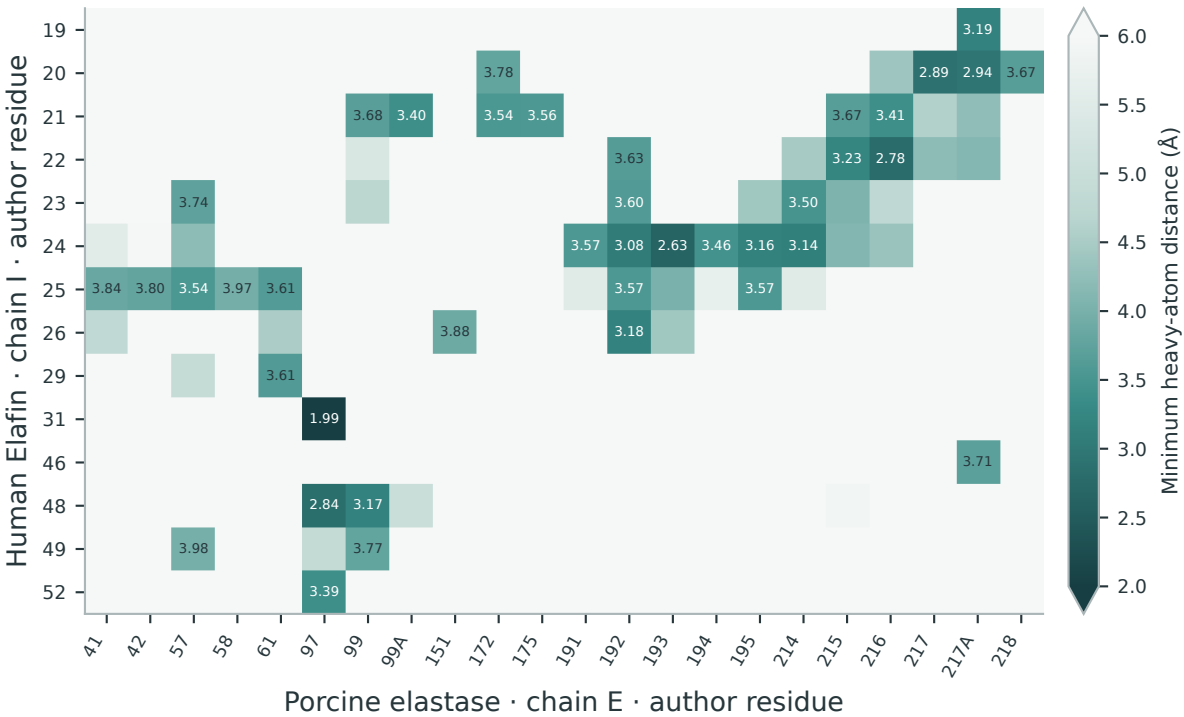

a Experimental reference complex

b Reactive-site contacts: selected residues

c Interface contact map (<4 Å residue set)

Elafin 47/57 residues resolved (11-57). Distances exclude waters, HETATM and hydrogen atoms; no symmetry mates.
Geometric proximity does not assign hydrogen bonds or affinity. This is a porcine enzyme reference, not human NE docking.

d Cutoff sensitivity of interface size
