

Elafin in solution: ensemble variation and alignment sensitivity

PDB 2REL | 11 deposited NMR conformers | mature Elafin residues 1-57

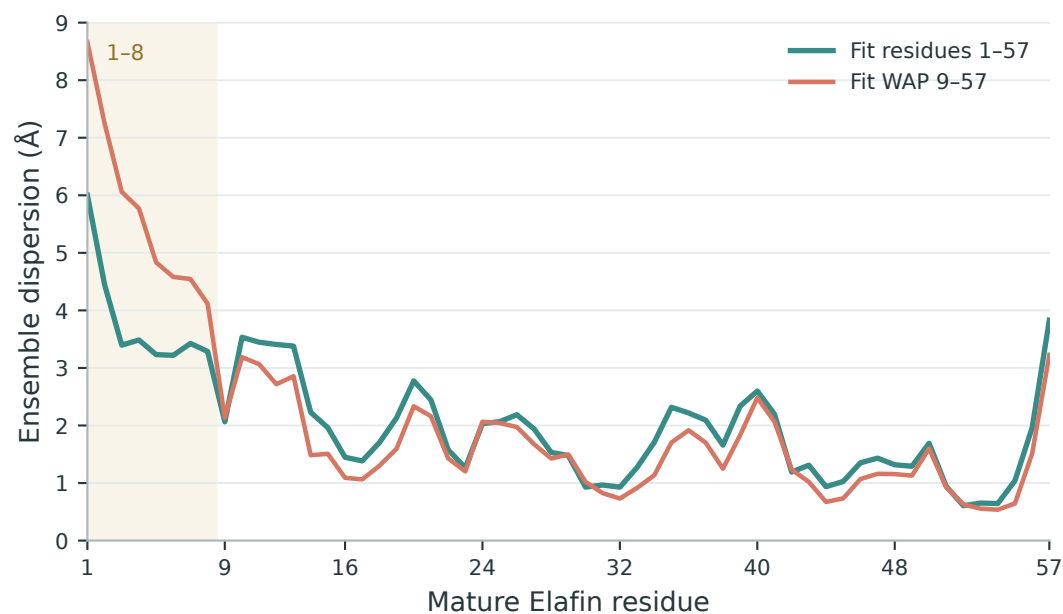

a Eleven conformers after WAP-domain alignment

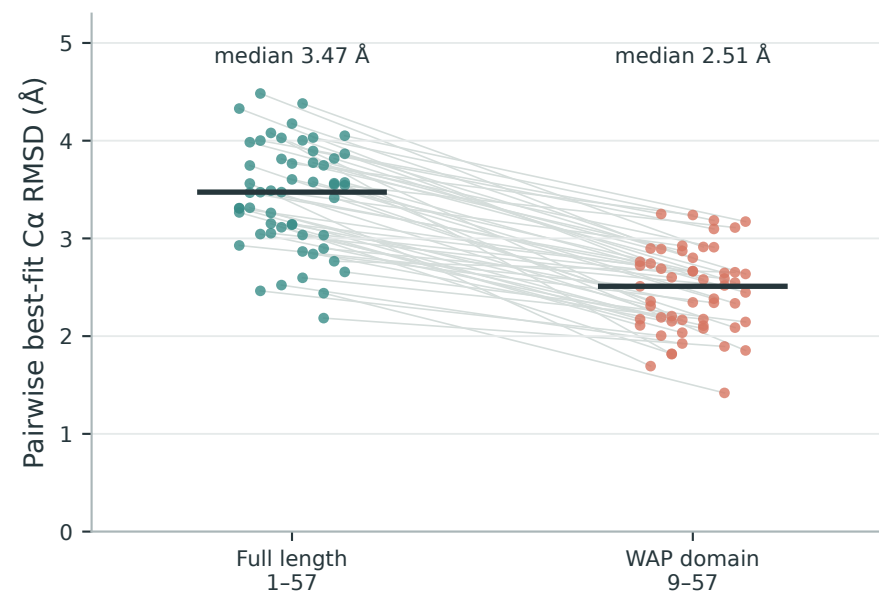

b Pairwise best-fit Cα RMSD (1-57)

c Residue-wise spread around the aligned mean

d Sensitivity to the fitted residue set

Each paired point is one of 55 conformer pairs, not an independent biological replicate. NMR ensemble dispersion is not MD-RMSF.
